

GYS

NEOPULSE 300

GYS has received Mercedes-Benz approval of its Neopulse 300 following extensive testing to Daimler AG group specifications.

The GYS Neopulse 300 can now be utilised by Mercedes-Benz's global repair network for welding and brazing on body/chassis work.

The MIG/MAG inverter offers up to 270A and high duty cycle, pulse-in-pulse welding. The LCD control panel provides an advanced but simple user interface.

This approval follows other recent endorsements from Ford Motor Company and Volkswagen Group for other welders in the GYS range.
