

GYS POWERDUCTION

GYS has introduced four new professional induction heaters to its range.

Induction is a versatile heating process providing instant and powerful heat to release/separate dissimilar metals of preheat steel, or with some machines aluminium as well, for a range of purposes.

The GYS range includes machines for every application from small bolt removal, dedicated car body tools to single and three phase high power units from 3.7KW to 16KW with liquid cooling for heavy duty applications and industrial use.

Powerduction has a simple digital display and control panel for precise power control. A range of quick change accessories offers improved accessibility for a variety of applications.
