

Complete dent- pulling workstation made in France

The GYS SPEEDLINER COMBI 230 E PRO dent-pulling system for both STEEL and ALUMINIUM has had a recent surge in sales for SAPE.

"We are seeing a lot of body shops repairing panels rather than replacing with new, which improves the opportunities to enhance profitability," said Darren Kenney, Group Marketing Manager at SAPE.

The GYS SPEEDLINER COMBI 230 E PRO has three guns, Steel – automatic or manual – and Aluminium – automatic. A real benefit is that the machine runs off 240-volt power but has a huge output of 7500 amps when used on aluminium. The kit is fully mobile with many varied accessories to improve the opportunities to repair. **NCR**
