• **OBD MEMORY SAVER**

Battery specialist GYS has launched the GYS pack OBD Memory Saver.

The product simply connects *via* the OBD port to provide a secure power supply. If necessary the powerful internal 7Ah AGM battery will maintain the vehicle electronic systems for many hours without the need for recharging. The lightweight and portable device comes supplied with an external mains charger for quick recharging. A 12V DC power socket can be used as a power supply for other devices, recharging of mobile phones for example, whilst on the move.
