

The MULTICOOL cooling unit is a system designed to cool water-cooled torches connected to all types of welding machines (GYS or other brands). This device is autonomous and has its own power supply. The operation of the torch trigger can be controlled by liquid flow detection to protect the torch from overheating.

- International quick connectors.
- Integrated flow sensor protecting the torch against a fault in the water circuit (plug, etc).
- Easy filling and draining of the cooling liquid.
- Reinforced metal case & non slip rubber pads.
- IP 23 S class for outside use.
